Interviews

Questions:

1. What do you think of the level of competitiveness of Kahoot right now, is there any problems with it? (chat, emotes, ranked)

2. What do you think of the current format of Kahoot, what other formats would you like to see? (short answers, essays, drawing, sending pictures, multiple choice, audio)

3. Do you like the current mode of the app, what is a game mode you would like to see? (team formats, tournaments, elimination)

4. Name a feature you currently don't like in the app and name a feature you would like to get added.

Name: Zhengyang Lin

Email: jlin66233@gmail.com

1. I believe the current level of competitiveness of Kahoot is enough as I mostly use it in class the competitiveness is dependent on the classes' atmosphere.

2. I think having other formats like short answers will defeat the purpose of Kahoot as it's a fast-paced game but other formats like drawing would be interesting.

3. From what I remember some of the game modes listed already exists in Kahoot and for other game mode like tournaments will need Kahoot to implement a queueing system.

4. I can't really think of a feature I don't like but I would like to see a queueing system.

Name: Mathew McCarthy

Email: matthewmccarthy0331@gmail.com

1. I think the level of competitiveness currently existent in Kahoot is quite lacking. With only two aspects being getting the answer correct and the speed of answering. Although I think Kahoot is best played with friends so there is additional motivation to win the game.

2. I think maps could be cool with the current format of Kahoot. Where you ask where something is on a map with a photo of a place then the contestants must pin it to a map.

3. I think maps could be cool with the current format of Kahoot. Where you ask where something is on a map with a photo of a place then the contestants must pin it to a map.

4. I think maps could be cool with the current format of Kahoot. Where you ask where something is on a map with a photo of a place then the contestants must pin it to a map. More than 4 answers for questions.

Name: Matthew Cai

Email: z5582589@ad.unsw.edu.au

1. As of now, I believe Kahoot has set a solid foundation in its level of competitiveness as it allows users of varying levels to be able to compete with other users. Personally speaking, I do not believe there are any issues with the state of Kahoot, however including quality of life features such as including an emotes option has their pros and cons. More specifically, the introduction of emotes can make users more engaged in the quiz, however, may also have the side effect of distracting other users and stirring up arbitrary emotions (namely rage).

2. Kahoot's current format is both beginner-friendly and simple, encouraging users to stay entertained while focusing on deciphering the answer to the question. From this, Kahoot can utilise innovative features that may elevate its beginner-friendly format to one that offers users more opportunities to express their answers allowing further growth on their critical thinking skills. In many instances, I believe that images speak louder than words which can make for a more immersive experience for users, making them more engaged and focused in answering questions.

3. The current mode holds a simplistic design which is easy to navigate and fun to interact with. Kahoot can elevate their product by including a new game mode that is more designed for intermediate to advanced users. Formats such as team mode adds a whole new dimension to the quiz making the user work with other users to come out victorious. Alternatively, adding an elimination mode includes a new element into the quiz where one wrong answer could be the end for the user; this adds a new layer of pressure onto users.

4. One feature that I currently despise in Kahoot is the fact that students with different academic levels will take vastly contrasting amounts of time to answer certain questions. This hassle stems from some users having to wait for other users to finish before proceeding to the next question. A simple feature that can address this is to provide a hint when either half the users have answered or if half the time has passed. This feature will effectively help weaker users to answer the questions more efficiently while still offering them a chance to gain a reduced number of points.

User Stories

User Story 1

As the end user, I want to be able to answer the next question without waiting for my slow cohort, so that I can keep the flow going and stay in the mood for solving problems.

User Story 2

As the end user, I want to try different game modes, to keep the game fresh and fun to play.

User Story 3

As the end user, I would like some quality-of-life features such as emotes, so that I can stay engaged during the game.

User Story 4

As the end user, I want to be able to play with others online, so that I can play more competitive games.

User Story 5

As the end user, I want the scoring system to account for factors beyond correctness and speed, so that I can focus on understanding material and learning rather than just memorizing.

User story 6

As the end user, I want to be able to have more than 4 multiple choice answer to select from, or even be able to write short answer, so that the difficulty of the quizzes is increased.

User Story 7

As the end user, I would want the game to stay fast paced and so implementing short answer question can slow down the tempo of the game and reduce the desire of playing.

Acceptance Criteria

From User Story 1

- Each user should be able to continue the quiz without waiting for the others
- Points will still be based on how quick they answered the question, relative to when they got the question
- Quizzes might have the same topics but lower difficulty so each user can pick according to their skills
- If that happens, value of points will be determined by the users or reduce/increase the final point by a percentage

From User Story 2

- User would be able to pick the different game modes
- Game modes will include teams, clans, tournaments, ranked ladder and any variation of it

From User Story 3

- Every user can interact with another
- Some examples include emotes, messages, soundboards, etc
- This can be used to either cheer/provoke singular/multiple users

From User Story 4

- User can queue up for an online game
- Users would not need a code to join, there will be a separate option for public/private lobbies
- Users could see a ranked ladder to see how they compare
- Users can do a weekly quiz that can compare to others in the world

From User Story 5

- Users can pick what the win conditions are
- Instead of being the fastest to click, there could be most win streaks
- Different questions can have different weightings that contribute to the final points

From User Story 6

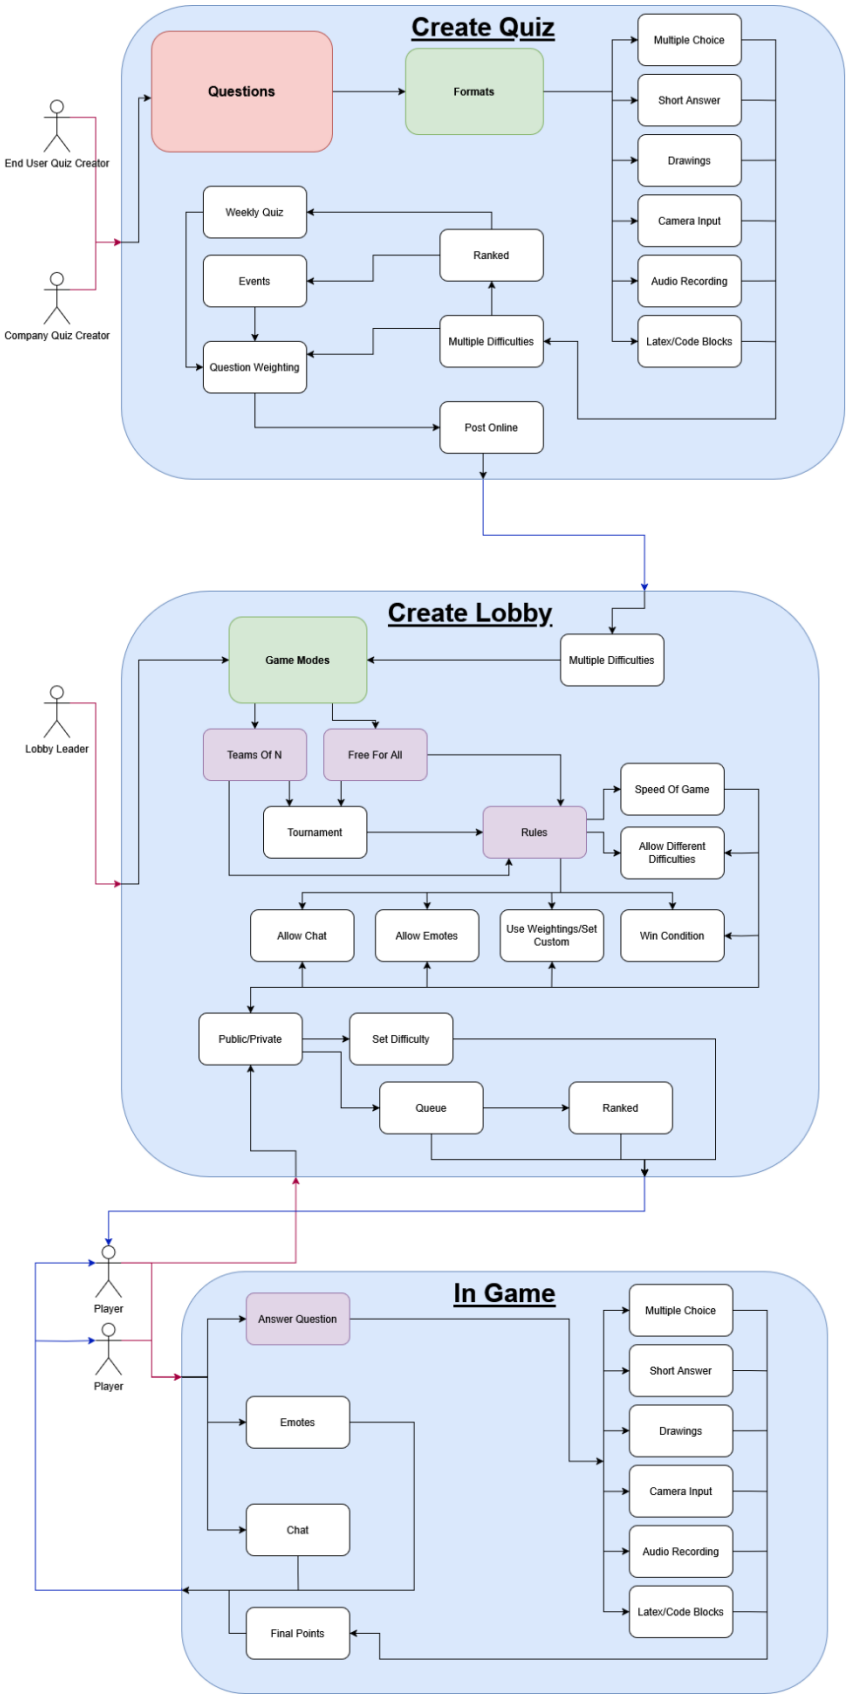

- User would be able to use other formats in the quiz
- This affects creating the quiz and playing the quiz
- Example formats include short answer, drawings, sounds, videos, etc

From User Story 7

- User could pick a faster paced game mode
- This game mode will be like the blitz version in chess.com

Use Case

Assuming every user has registered and has a valid profile:

Feedback

Name: Matthew Cai

Yeah, this diagram works and solves the problems I addressed.

Name: Mathew McCarthy

As the end user, I want to have maps implemented in Kahoot, aside from that, I am happy with the way create quiz, create lobby, and in game increases the competitiveness and difficulty while also increasing interactivity between players.

Name: Zhengyang Lin

Yea this should solve the problems which currently exist, and I think the way that we can pick the type of format will allow my students to be better engaged.
